---	---	--	--	---	--------------------------------------

QUALCOMM is in part a 'play' on the proliferation of artificial intelligence [AI]. The company is well-positioned to be one of the leaders in this area in the long run, though near-term revenue challenges remain.

Stock Chart (weekly)

The week with the highest trading volume out of the last 30 weeks was a week of heavy selling, or distribution (red bar).

Investment Highlights

- QUALCOMM has revolutionized the mobile phone industry. Through its own R&D and through partnerships with other firms, the company develops breakthrough technology and then licenses it. The firm has one of the strongest Economic Castles in our coverage. It was founded in 1985 and is headquartered in San Diego, California.
- QUALCOMM's fiscal 2024 results were amazing. On a non-GAAP basis, revenue increased 9%, EBT increased 20%, net income advanced 22%, while earnings per share leapt 21%. The company is well positioned across Handsets, PC, Automotive, and Industrial Internet of Things.
- Sentiment surrounding QUALCOMM turned positive following Apple's agreement, announced back in April 2019, to drop all pending litigation and the formation of a multiyear licensing and chipset supply agreement. QUALCOMM's strength in 5G has it well-positioned for growth moving forward and likely played a role in the settlement. AI offers upside potential.

- QUALCOMM views its growth runway in the automotive semiconductor industry quite favorably, with an eye towards advanced driver-assistance systems and fully-autonomous vehicles. QUALCOMM acquired Veoneer's automotive chip operations.

- QUALCOMM concluded a lucrative patent dispute with Huawei in July 2020. Trade tensions between the U.S. and China are worth monitoring going forward. QUALCOMM's future remains bright and is getting brighter, in our view.

Structure of the Communications Equipment Industry

The communications equipment industry continues to undergo rapid change, as network traffic expands, new service offerings are introduced, and end user demand shifts. Competition among communication network solution vendors remains intense, as securing new opportunities often requires agreeing to less favorable commercial terms and pricing. Rivalry among constituents will only increase in coming years, as Chinese equipment vendors gain entry into the US market and incumbent competitors strive to retain share. We don't think such conditions are favorable to generating long-term economic profit.

Economic Profit Analysis**ValueCreation™****EXCELLENT**

The best measure of a firm's ability to create value for shareholders is expressed by comparing its return on invested capital (ROIC) with its weighted average cost of capital (WACC). The gap or difference between ROIC and WACC is called the firm's economic profit spread. QUALCOMM's 3-year historical return on invested capital (without goodwill) is 60.7%, which is above the estimate of its cost of capital of 9.4%. As such, we assign the firm a ValueCreation™ rating of EXCELLENT. In the chart to the right, we show the probable path of ROIC in the years ahead based on the estimated volatility of key drivers behind the measure. The solid grey line reflects the most likely outcome, in our opinion, and represents the scenario that results in our fair value estimate.

ROIC - WACC Spread, 3-year historical average 51.2%

ROIC - WACC Spread, 5-year projected average 69.3%

These spreads equal the firm's annual average ROIC (excluding goodwill) less its WACC.

ValueTrend™**NEGATIVE**

QUALCOMM receives a ValueTrend™ rating of NEGATIVE, which is based on the company's trailing three-year performance. The firm's ROIC (excluding goodwill) fell to 58.9% last year from its trailing 3-year average of 60.7%. We expect ROIC (excluding goodwill) to be in the ballpark of about 73% by the end of our discrete forecast period, with downside risk to about 63% over that time period.

The graph above shows the firm's ROIC (excluding goodwill) compared with historical averages and its WACC.

Assessment of Company Dividend Strategy**Key Strengths**

As the complexity of technology accelerates, QUALCOMM sets out to solve the problems such complexity poses. Providing advancing technology at significant scale is one of the firm's mantras to continue to transform its business and the world. The company is targeting lucrative opportunities across the board with an eye towards supplying semiconductor components to support the Internet of Things (IoT) trend, enable 5G handsets and equipment, and cater to the growing computing needs of the automotive industry. QUALCOMM is shareholder friendly and has returned tens of billions to shareholders since fiscal 2003 via share repurchases and dividends. The proliferation of artificial intelligence could spell upside.

Potential Weaknesses

QUALCOMM is a tremendous free cash flow generator, though its sizable net debt load, partially a product of substantial share repurchases executed in recent fiscal years, weighs negatively on its Dividend Cushion ratio. Competing capital allocation decisions, from share buybacks to potential M&A activity, need to be monitored. Rising trade tensions between the U.S. and China represent another concern. The core of QUALCOMM's licensing model remains intact after Apple dropped all litigation and reached a supply agreement with the firm, followed up by another big agreement with Huawei. Its strength in 5G has QUALCOMM very well-positioned moving forward. The long term is bright.

Note: Valuentum may provide an adjusted ROIC measure to better reflect the economic substance of a company's operations, as in the case of companies with negative invested capital.

Growth Analysis

Revenue Growth MODEST

		Last Fiscal Year Revenue	3-year Historical CAGR	5-year Projected CAGR
QUALCOMM	USD	38,962	5.1%	5.5%
Alphabet	USD	307,394	19.0%	11.1%
Amazon.com	USD	637,959	10.7%	10.3%
Apple	USD	391,035	2.2%	7.3%
Microsoft	USD	245,122	13.4%	11.4%
Peer Median			12.1%	10.7%
Industry Median			9.1%	8.7%

QUALCOMM's revenue expansion has trailed the median of both its peer group and its industry group during the past three years. We expect the firm's pace of revenue growth to fall below the median of both its peer group and industry group during the next five years. Our growth assessment of each firm is based on the firm's 5-year forward revenue CAGR. QUALCOMM's future pace of revenue growth is MODEST, in our opinion.

EBITDA Growth

		Last Fiscal Year EBITDA	3-year Historical CAGR	5-year Projected CAGR
QUALCOMM	USD	11,959	1.7%	6.5%
Alphabet	USD	100,172	22.2%	15.7%
Amazon.com	USD	120,468	26.6%	14.8%
Apple	USD	134,661	3.8%	9.1%
Microsoft	USD	129,433	17.0%	11.8%
Peer Median			19.6%	13.3%
Industry Median			8.1%	12.7%

QUALCOMM's EBITDA expansion has trailed both that of its peer group and its industry group during the past three years. We expect the firm's pace of EBITDA growth to fall below that of both its peer group and industry group during the next five years. Alphabet sports the highest expected EBITDA growth rate among peers.

Net Income Growth

		Last Fiscal Year Net Income	3-year Historical CAGR	5-year Projected CAGR
QUALCOMM	USD	10,110	3.9%	5.3%
Alphabet	USD	73,795	22.4%	17.0%
Amazon.com	USD	59,248	21.1%	17.9%
Apple	USD	93,736	-0.3%	11.7%
Microsoft	USD	88,136	12.9%	12.7%
Peer Median			17.0%	14.9%
Industry Median			4.4%	12.8%

QUALCOMM's net income expansion has trailed both that of its peer group and its industry group during the past three years. We expect the firm's pace of net income growth to fall below that of both its peer group and industry group during the next five years. Amazon.com sports the highest expected net income growth rate among peers.

Cash Flow and Financial Leverage Analysis

Cash Flow Generation STRONG

The bars above show the firms operating cash flow, capital expenditures, and free cash flow, respectively.

Firms that generate a free cash flow margin (free cash flow divided by total revenue) above 5% are usually considered cash cows. QUALCOMM's free cash flow margin has averaged about 23.9% during the past 3 years. As such, we think the firm's cash flow generation is relatively STRONG. The free cash flow measure shown above is derived by taking cash flow from operations less capital expenditures and differs from enterprise free cash flow (FCFF), which we use in deriving our fair value estimate for the company. For more information on the differences between these two measures, please visit our website at Valuentum.com. At QUALCOMM, cash flow from operations increased about 34% from levels registered two years ago, while capital expenditures fell about 54% over the same time period.

Cash Flow from Operations

		Last Fiscal Year CFO	3-year Historical CAGR	5-year Projected CAGR
QUALCOMM	USD	12,202	5.0%	5.1%
Alphabet	USD	101,746	16.0%	12.8%
Amazon.com	USD	115,877	35.7%	14.6%
Apple	USD	118,254	4.4%	11.6%
Microsoft	USD	118,548	15.6%	11.4%
Peer Median			15.8%	12.2%
Industry Median			9.2%	11.5%

QUALCOMM's cash flow from operations expansion has trailed both that of its peer group and its industry group during the past three years. We expect the firm's pace of cash flow from operations growth to fall below that of both its peer group and industry group during the next five years. Amazon.com sports the highest expected cash flow from operations growth rate among peers.

Free Cash Flow (CFO-capital expenditures)

		Last Fiscal Year FCF	3-year Historical CAGR	5-year Projected CAGR
QUALCOMM	USD	11,161	8.9%	3.0%
Alphabet	USD	69,495	17.5%	16.8%
Amazon.com	USD	32,878	-230.7%	34.7%
Apple	USD	108,807	5.4%	11.6%
Microsoft	USD	74,071	9.7%	15.4%
Peer Median			7.5%	16.1%
Industry Median			9.1%	11.4%

QUALCOMM's free cash flow expansion has been greater than that of its peer group but has trailed that of its industry group during the past three years. We expect the firm's pace of free cash flow growth to fall below that of both its peer group and industry group during the next five years. Amazon.com sports the highest expected free cash flow growth rate among peers.

Financial Leverage LOW

The bars above show the firm's annual debt-to-EBITDA. The red line shows the firm's normalized measure.

Firms that exhibit high leverage tend to be more risky than firms with relatively low debt loads, all else equal. We measure financial leverage by taking a firm's current total debt load and dividing it by the firm's trailing average 3-year annual EBITDA. Firms that are over 3 for this metric, we rate as having high leverage. Companies that have less than 1.5 turns of leverage (or a measure below 1.5), we rate as having low leverage. QUALCOMM's normalized debt-to-EBITDA measure of about 1.13 puts it in the LOW camp.

Valuation Breakdown

In the chart below, we show the build up to our estimate of total enterprise value for QUALCOMM and the break down to the firm's total equity value, which we estimate to be about 177.08USD billion. The present value of the enterprise free cash flows generated during each phase of our model and the net balance sheet impact is displayed. We divide total equity value by diluted shares outstanding to arrive at our \$158 per share fair value estimate.

In Millions of USD

DCF Valuation Summary

We think QUALCOMM is worth \$158 per share with a fair value range of \$126.00 - \$190.00. The margin of safety around our fair value estimate is driven by the firm's LOW ValueRisk™ rating, which is derived from an evaluation of the historical volatility of key valuation drivers and a future assessment of them. Our near-term operating forecasts, including revenue and earnings, do not differ much from consensus estimates or management guidance. Our model reflects a compound annual revenue growth rate of 5.5% during the next five years, a pace that is higher than the firm's 3-year historical compound annual growth rate of 5.1%. Our model reflects a 5-year projected average operating margin of 31%, which is above QUALCOMM's trailing 3-year average. Beyond year 5, we assume free cash flow will grow at an annual rate of 3.1% for the next 15 years and 3% in perpetuity. For QUALCOMM, we use a 9.4% weighted average cost of capital to discount future free cash flows.

Margin of Safety Analysis

Range of Potential Outcomes

Our discounted cash flow process values each firm on the basis of the present value of all future free cash flows. Although we estimate the firm's fair value at about \$158 per share, every company has a range of probable fair values that's created by the uncertainty of key valuation drivers (like future revenue or earnings, for example). After all, if the future were known with certainty, we wouldn't see much volatility in the markets as stocks would trade precisely at their known fair values. Our ValueRisk™ rating sets the margin of safety or the fair value range we assign to each stock. In the graph above, we show this probable range of fair values for QUALCOMM. We think the firm is attractive below \$126 per share (the green line), but quite expensive above \$190 per share (the red line). The prices that fall along the yellow line, which includes our fair value estimate, represent a reasonable valuation for the firm, in our opinion.

ValueRisk™

LOW

QUALCOMM receives a ValueRisk™ rating of LOW based of the historical volatility of key drivers of economic value creation. The fair value range sets the margin of safety around our fair value estimate of the firm's shares.

Revenue Volatility	11.8%
Gross Margin Volatility	12.9%
Earnings (EBI) Volatility	10.5%
Cash Flow (FCFF) Volatility	Greater than 50%
Fair Value Range	20.0%

The Fair Value Range sets the premium or discount on our estimate of the firm's fair value.

Upside and Downside Probabilities

Probability (fair value < \$0)	Less than 0.1%
Probability (fair value > 2x current share price)	0.00%

We strive to answer a few questions that investors often ask: 1) What are the chances of a total loss of investment in this company? and 2) What is the chance that the company is really worth twice what I paid for it? The probability (fair value < 0) strives to answer the first question. It indicates the chance that the firm may encounter insolvency based on the characteristics of its cash flow stream, capital structure, and risk profile. The probability (fair value > 2x current share price) strives to answer the second question. It is our best estimate of whether investors are participating in a half-off sale by buying the company's shares at current prices.

Future Path of Fair Value

We estimate QUALCOMM's fair value at this point in time to be about \$158 per share. As time passes, however, companies generate cash flow and pay out cash to shareholders in the form of dividends. The chart to the right compares the firm's current share price with the path of QUALCOMM's expected equity value per share over the next three years, assuming our long-term projections prove accurate. The range between the resulting downside fair value and upside fair value in Year 3 represents our best estimate of the value of the firm's shares three years hence. This range of potential outcomes is also subject to change over time, should our views on the firm's future cash flow potential change. The expected fair value of \$197 per share in Year 3 represents our existing fair value per share of \$158 increased at an annual rate of the firm's cost of equity less its dividend yield. The upside and downside ranges are derived in the same way, but from the upper and lower bounds of our fair value estimate range.

The graph above shows the expected future fair value of the firm's shares relative to its current stock price.

Technical Analysis

Technical Evaluation

BEARISH

The firm's near-term moving average (5-week, grey line) and medium-term moving average (13-week, red line) are shown in the chart above. Typically, when a shorter-term moving average crosses a medium- or longer-term moving average from below, it represents a bullish signal. If the short-term moving average crosses from above, traders often view this as bearish. QUALCOMM's 5-week moving average is below its 13-week measure, indicating a BEARISH trend. This activity further confirms the company's 30-week downtrend.

30-week Price and Volume Chart (weekly)

In the chart above, we pinpoint the heaviest accumulation or distribution week of the firm, determined by the week with the highest trading volume during the past 30 weeks. A heavy accumulation (buying) or distribution (selling) week often determines the future near-term direction of the firm's share price, as money managers continue to move in or out of the stock in the days and weeks ahead driving the stock up or down, respectively. For QUALCOMM, the week with the highest trading volume out of the last 30 weeks was a week of heavy buying, or accumulation (green bar). Such market activity could indicate a reversal of a downtrend or further confirmation of the firm's uptrend.

Upside/Downside Volume

BULLISH

The level and trend of the Upside/Downside (U/D) volume ratio reveals whether institutional participation has been bullish or bearish as of late. QUALCOMM's U/D volume ratio of 1.1 is not only greater than 1 but also is better than its trailing average, indicating BULLISH institutional interest during the past several weeks.

Money Flow Index (MFI)

NEUTRAL

The Money Flow Index (MFI) is an oscillator that uses price and volume to measure buying and selling pressure. Chartists often look for overbought (above 80) and oversold (below 20) levels to warn of unsustainable near-term price extremes. QUALCOMM's MFI of 44 (green line) is neutral, suggesting the firm's stock is neither overbought nor oversold at this time. However, a score below 50 tends to favor bears. The MFI can also be used to gauge the strength or weakness of a firm's price trend. In QUALCOMM's case, its stock has generally declined during the past several weeks, but money flow or momentum has improved, a bullish divergence. We'd keep a close watch for improving technicals.

Relative Price Strength

NEUTRAL

A firm's relative price strength can be assessed over any number of time horizons. We show the firm's performance over the past 5 weeks, 13 weeks, and 30 weeks below. In arriving at our relative strength rating for each company, we assess the past 13 weeks, which includes the market's reaction to the firm's most recently reported quarter, where applicable, and other more recent economic events. During the past 13 weeks, QUALCOMM's shares returned -5.5%, while the market benchmark returned -4.1%. We think QUALCOMM's 13-week relative price performance is NEUTRAL.

5-week Company Performance	-5.3%
5-week Market Benchmark Performance	-7.2%
5-week Relative Performance vs. Market Benchmark	1.9%
13-week Company Performance	-5.5%
13-week Market Benchmark Performance	-4.1%
13-week Relative Performance vs. Market Benchmark	-1.4%
30-week Company Performance	-6.5%
30-week Market Benchmark Performance	0.6%
30-week Relative Performance vs. Market Benchmark	-7.2%

Timeliness Matrix™

Equity Valuation

Relative Strength	Overvalued	Fairly Valued	Undervalued
Strong			
Neutral			
Weak			

Firms that are undervalued and currently showing near-term pricing strength score near the top right of the matrix.

Companies that are undervalued and showing near-term relative price strength could represent timely buys, as the stock may be attractive to both value and momentum investors. A cross section of the firm's equity valuation and its relative share price strength is shown in the matrix above. We tend to prefer undervalued stocks that have strong pricing momentum, also called Valuentum stocks.

FAIRLY VALUED

We think the Technology Giants industry is fairly valued at this time. The industry's market cap is trading between 80% and 120% of our estimate of its fair value based on our DCF process. Although we use a firm-specific ValueRisk™ measure to determine whether a firm is undervalued or overvalued based on our DCF process, we consider an industry to be undervalued if it is trading below 80% of our estimate of its fair value and overvalued if it is trading at over 120% of our estimate of its fair value. We think these fair value ranges are appropriate given the diversification benefits of holding a basket of stocks. Although there may be individual opportunities within the Technology Giants industry, we don't find the industry as a whole attractive based solely on valuation.

The above bar chart reveals the price/fair value of the company, its peers, and the industry as a whole.

Shaded blue denotes that the firm has earned the highest rating for that respective category.

Apple is as much a brand as it is one of the most innovative companies.

Stock Chart (weekly)

The week with the highest trading volume out of the last 13 weeks was a week of heavy buying, or accumulation (green bar).

Company Vitals	Investment Highlights
Market Cap (USD) \$675,472	<ul style="list-style-type: none"> Apple is as much a brand as it is one of the world's most innovative companies. The firm is no longer known for its iPods and personal computers, as the proliferation of the iPhone over the past several years has been a sight to behold. The company's execution remains top notch, and we expect it to continue to roll out innovative products in smartphones and wearable technology, its most recent major product launch. Criticism over the firm's dependence on sales of the iPhone gained momentum in fiscal 2016, as the second quarter of the fiscal year marked the first quarterly sales decline in 13 years. High levels of demand for the iPhone 7 and multiple safety issues at rival Samsung have eased concerns for the time being. Apple's rollout of future iterations of the iPhone should propel its fundamentals higher. Though we're not embedding another blockbuster hit in our model, we wouldn't be surprised if Apple delivers another one from its pipeline. Perhaps only a dream five years ago, the popularity of the new Apple Watch is now worth watching, though it has yet to catch fire in the eyes of consumers. Investors should pay close attention to the firm's gross margin, which is expected to fall to 37.5%-38% in fiscal 2016 from 40% in fiscal 2015. Pricing and cost pressures may be unavoidable. A slight step back in fiscal 2016 should not be a major concern to investors given Apple's massive cash position and impressive track record. Apple's cash hoard is more than some of the market capitalizations of the largest companies in the S&P 500. The company retains tremendous flexibility in this regard, and we continue to expect dividend increases and share buybacks.

Structure of the Computer Hardware Industry **NEUTRAL**

The computer hardware space, which spans the personal computer to the iPhone and iPad, is highly competitive. The industry is characterized by frequent product introductions and rapid technological advances that can cause dramatic market share shifts. Though some firms benefit from a strong brand, participants often price aggressively, pressuring margins. Firms are also subject to potential component shortages/disruptions, which can punish performance. Obsolescence may be an eventuality for some, and services revenue has become critical for others. We're neutral on the space.

About Valuentum

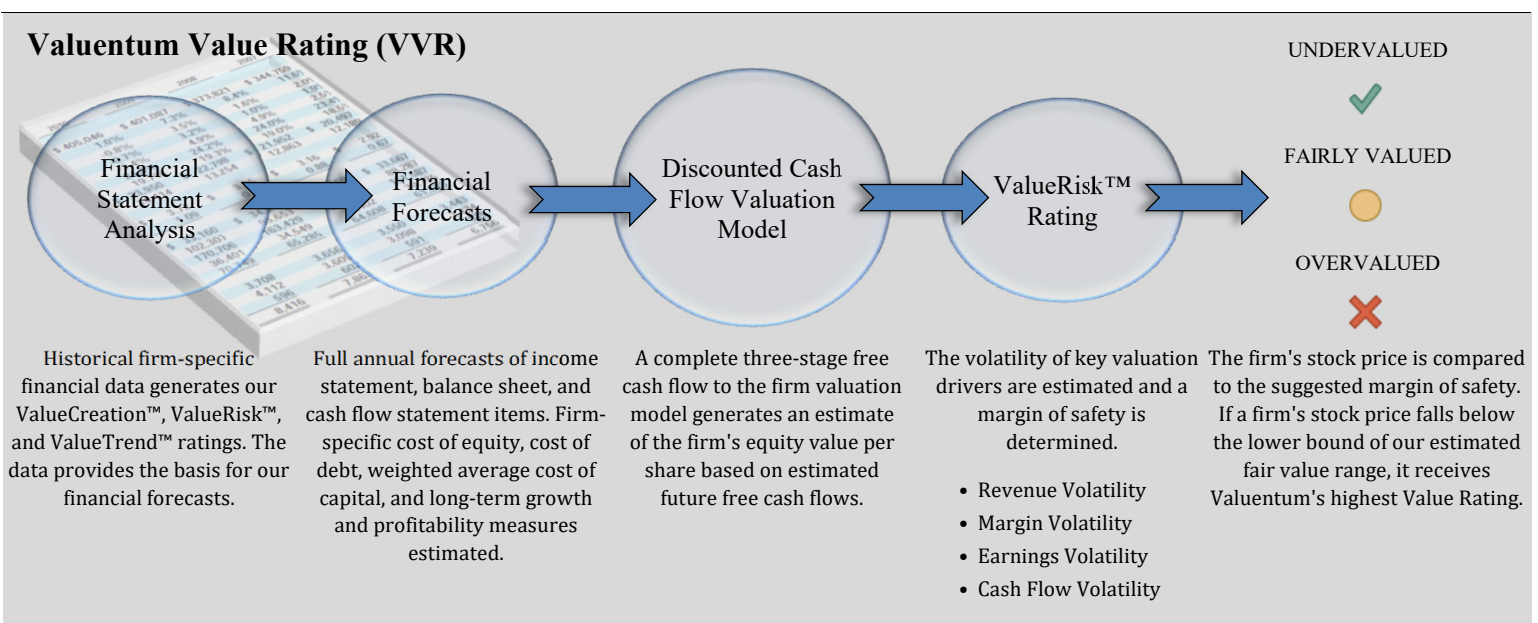

@Valuentum, we strive to stand out from the crowd. Most investment research publishers fall into a few camps, whether it be value, growth, income, momentum, chartist or some variant of the aforementioned. We think each in its own right holds merit, but we think the combination of these approaches can be even more powerful. After all, stock price movements aren't just driven by investors of the value or growth variety, but by all market participants. Therefore, we look at stocks from a variety of investment perspectives in order to better understand and identify ideas. We want to provide relevant information.

The core of our process is grounded in rigorous discounted cash flow analysis and incorporates the concept of a margin of safety. We offer a fair value estimate for each company and provide a relative valuation assessment in the context of a company's industry and closest peers. A cross section of our ValueCreation™ and ValueRisk™ ratings provides a financial assessment of a company's business quality, while our ValueTrend™ rating offers insight into the trajectory of a firm's economic profit creation. The Economic Castle rating measures the magnitude of future economic value generation, and the Dividend Cushion ratio assesses the financial capacity of a company to keep raising its dividend.

Our analysis doesn't stop there. We also offer a technical evaluation of the stock as well as other momentum indicators. We not only want to reveal to readers which firms may be undervalued, in our view, but we also want to provide readers with information to help them assess entry and exit points. Most research publishers focus on arriving at a target price or fair value estimate, but may fall short of providing a technical assessment to bolster buy and sell disciplines. We strive to go the distance and provide readers with answers--not half the story.

An explanation of our approach would not be complete if we didn't describe our ideal stock idea. We're looking for companies that are undervalued--both on a DCF basis and versus peers--have strong growth potential, have a solid track record of creating economic profits for shareholders with reasonable risk, are strong cash flow generators, have manageable financial leverage, and are currently showing bullish technical and momentum indicators. For dividend growth ideas, we look for companies that have both the capacity and willingness to keep raising the dividend.

Can such stock ideas exist? Subscribe to Valuentum to receive our best investment ideas and analysis on hundreds of stocks, dividends, ETFs and more.

Methodology for Picking Stocks - Valuentum Buying Index™ (VBI)

@Valuentum, we like to look at companies from a number of different perspectives. The Valuentum Buying Index (VBI) combines rigorous financial and valuation analysis with an evaluation of a stock's technicals to derive a rating between 1 and 10 for each company. The VBI places considerable emphasis on a company's discounted cash-flow (DCF) valuation, its relative valuation versus peers (both forward PE and PEG ratios), and its technicals in order to help readers assess entry and exit points on the most interesting ideas.

Let's follow the red line on the flow chart below to see how a company can score a 10, the best mark on the index. First, the company would need to be 'undervalued' on a DCF basis and 'attractive' on a relative

value basis. The stock would also have to be exhibiting 'bullish' technicals. The firm would need a ValueCreation™ rating of 'good' or 'excellent', exhibit 'high' or 'aggressive' growth prospects, and generate at least a 'medium' or 'neutral' assessment for cash flow generation, financial leverage, and relative price strength.

This is a tall order for any company. Stocks that don't make the cut for a 10 are ranked accordingly, with the least attractive stocks, in our opinion, garnering a rating of 1. Most of our coverage universe registers ratings between 3 and 7, but at any given time there could be large number of companies garnering either very high or very low scores, especially at market lows or tops, respectively.

The Best Ideas Newsletter portfolio puts the VBI into practice.

VBI Score	Consideration
10	Top Idea
9	Strong Idea
6 to 8	Constructive
3 to 6	Less Exciting
1 to 2	Poor Idea

Technicals >= Bullish
 ValueCreation(TM) >= Good
 Growth >= High
 Cash Flow Generation >= Medium
 Financial Leverage <= Medium
 Relative Strength >= Neutral
 Final Score: 10

Glossary

Estimated Fair Value. This measure is our opinion of the fair equity value per share of the company. If our forecasts prove accurate, which may not always be the case, we may expect a firm's stock price to converge to this value within the next 3 years.

Fair Value Range. The fair value range represents an upper bound and lower bound, between which we would consider the firm to be fairly valued. The range considers our estimate of the firm's fair value and the margin of safety suggested by the volatility of key valuation drivers, including revenue, gross margin, earnings before interest, and enterprise free cash flow (the determinants behind our ValueRisk™ rating).

DCF Valuation. We opine on the firm's valuation based on our DCF process. Firms that are trading with an appropriate discount to our fair value estimate receive an UNDERVALUED rating. Firms that are trading within our fair value range receive a FAIRLY VALUED rating, while firms that are trading above the upper bound of our fair value range receive an OVERVALUED rating.

Relative Value. We compare the firm's forward price-to earnings (PE) ratio and its price/earnings-to-growth (PEG) ratio to that of its peers. If both measures fall below the peer median, the firm receives an ATTRACTIVE rating. If both are above the peer median, the firm receives an UNATTRACTIVE rating. Any other combination results in a NEUTRAL rating.

ValueCreation™. This is a proprietary Valuentum measure. ValueCreation™ indicates the firm's historical track record in creating economic value for shareholders, taking the average difference between ROIC (without goodwill) and the firm's estimated WACC during the past three years. The firm's performance is measured along the scale of EXCELLENT, GOOD, POOR, and VERY POOR. Those firms with EXCELLENT ratings have a demonstrated track record of creating economic value, while those that register a VERY POOR mark have been destroying economic value.

ValueRisk™. This is a proprietary Valuentum measure. ValueRisk™ indicates the historical volatility of key valuation drivers, including revenue, gross margin, earnings before interest, and enterprise free cash flow. The standard deviation of each measure is calculated and scaled against last year's measure to arrive at a percentage deviation for each item. These percentage deviations are weighted equally to arrive at the corresponding fair value range for each stock, measured in percentage terms. The firm's performance is measured along the scale of LOW, MEDIUM, HIGH, and VERY HIGH. The ValueRisk™ rating for each firm also determines the fundamental beta of each firm along the following scale: LOW (0.85), MEDIUM (1), HIGH (1.15), VERY HIGH (1.3).

ValueTrend™. This is a proprietary Valuentum measure. ValueTrend™ indicates the trajectory of the firm's return on invested capital (ROIC). Firms that earned an ROIC last year that was greater than the 3-year average of the measure earn a POSITIVE rating. Firms that earned an ROIC last year that was less than the 3-year average of the measure earn a NEGATIVE rating.

Cash Flow Generation. Firms' cash flow generation capacity are measured along the scale of STRONG, MEDIUM, and WEAK. A firm with a 3-year historical free cash flow margin (free cash flow divided by sales) greater than 5% receives a STRONG rating, while firms earning less than 1% of sales as free cash flow receive a WEAK rating.

Financial Leverage. Based on the firm's normalized debt-to-EBITDA metric, we rank firms on the following scale: LOW, MEDIUM, and HIGH. Companies with a normalized debt-to-EBITDA ratio below 1.5 receive a LOW score, while those with a measure above 3 receive a HIGH score.

Upside/Downside Volume. Heavy volume on up days and lower volume on down days suggests that institutions are heavily participating in a stock's upward advance. We use the trailing 14-week average of upside and downside volume to calculate an informative ratio. We rank each firm's U/D volume ratio along the following scale: BULLISH, IMPROVING, DETERIORATING, and BEARISH.

Investment Style. Valuentum uses its own proprietary stock-classification system. Nano-cap: Less than \$50 million; Micro-cap: Between \$50 million and \$200 million; Small-cap: Between \$200 million and \$2 billion; Mid-cap: Between \$2 billion and \$10 billion; Large-cap: Between \$10 billion and \$200 billion; Mega-cap: Over \$200 billion. Blend: Firm's that we think are undervalued and exhibit high growth prospects (growth in excess of three times the rate of assumed inflation). Value: Firm's that we believe are undervalued, but do not exhibit high growth prospects. Growth: Firms that are not undervalued, in our opinion, but exhibit high growth prospects. Core: Firms that are neither undervalued nor exhibit high growth prospects.

Company Vitals. In this section, we list key financial information and the sector and industry that Valuentum assigns to the stock. The P/E-Growth (5-yr), or PEG ratio, divides the current share price by last year's earnings (EPS) and then divides that quotient by our estimate of the firm's 5-year EPS growth rate. The estimated normalized diluted EPS and estimated normalized EBITDA represent the five-year forward average of these measures used in our discounted cash flow model. The P/E on estimated normalized EPS divides the current share price by estimated normalized diluted EPS. The EV/estimated normalized EBITDA considers the current enterprise value of the company and divides it by estimated normalized EBITDA. EV is defined as the firm's market capitalization plus total debt, minority interest, preferred stock less cash and cash equivalents.

Business Quality Matrix. We compare the firm's ValueCreation™ and ValueRisk™ ratings. The box is an easy way for investors to quickly assess the business quality of a company. Firms that generate economic profits with little operating variability score near the top right of the matrix.

Timeliness Matrix. We compare the company's recent stock performance relative to the market benchmark with our assessment of its valuation. Firms that are experiencing near-term stock price outperformance and are undervalued by our estimate may represent timely buys.

Range of Potential Outcomes. The firm's margin of safety is shown in the graphic of a normal distribution. We consider a firm to be undervalued if its stock price falls along the green line and overvalued if the stock price falls along the red line. We consider the firm to be fairly valued if its stock price falls along the yellow line.

Return on Invested Capital. At Valuentum, we place considerable emphasis on return on invested capital (both with and without goodwill). The measure focuses on the return (earnings) the company is generating on its operating assets and is superior to return on equity and return on assets, which can be skewed by a firm's leverage or excess cash balance, respectively.

Technical Evaluation. We evaluate a firm's near-term and medium-term moving averages and money flow index (MFI) to assign each firm a rating along the following scale: VERY BULLISH, BULLISH, NEUTRAL, BEARISH, and VERY BEARISH.

Stock Price Relative Strength. We assess the performance of the company's stock during the past quarter, 13 weeks, relative to an ETF that mirrors the aggregate performance of constituents of the stock market. Firms are measured along the scale of STRONG, NEUTRAL, and WEAK. Companies that have outperformed the market index by more than 2.5% during this 13-week period receive a STRONG rating, while firms that trailed the market index by more than 2.5% during this 13-week period receive a WEAK rating.

Money Flow Index (MFI). The MFI is a technical indicator that measures buying and selling pressure based on both price and volume. Traders typically use this measure to identify potential reversals with overbought and oversold levels. We use a 14-week measure to rank firms along the following scale: EXTREMELY OVERBOUGHT (>90), OVERBOUGHT (80-90), NEUTRAL (20-80), OVERSOLD (10-20), EXTREMELY OVERSOLD (0-10).
