Investment Highlights

• In October 2021, Cabot merged with Cimarex to create Coterra Energy with a new ticker, CTRA. Coterra is focused on extracting raw energy resources from the Marcellus shale play, the Permian Basin, and the Anadarko Basin in the US. It unlocked material cost savings from the merger. Coterra is headquartered in Houston, Texas.

• Coterra is capitalizing on incredibly favorable raw energy resources pricing seen of late by stepping up its investment in the business to support its oil & gas production base. The company's growth outlook is quite bright in the current environment.

• Coterra's business model remains capital intensive given the need to continuously drill and complete new wells to maintain its upstream production base. The company has a net debt load which hinders its financial flexibility. In the wake of its free cash flows swelling higher, Coterra launched a share buyback program in 2022. Revenue and earnings have faced pressure more recently, however.

• Coterra is home to a vast resource base. Its positions in the Permian and Anadarko basins are liquids-rich, home to ample crude oil and natural gas liquids resources, and its position in the Marcellus shale play gives it access to some of the lowest cost natural gas supplies around.

• Commodity price swings make Coterra's future profitability levels volatile. We caution that as Coterra steadily develops its best well locations, when it comes time to develop its less prolific well locations, that will weigh negatively on its future profitability levels.

Structure of the Independent Oil & Gas Industry

The oil and gas business is highly competitive in the exploration, acquisition, and production of reserves. Changes in deepwater drilling laws and other regulatory initiatives can add uncertainty to operations. The trajectory of global economic growth, the actions of OPEC, and political and environmental uncertainty are other key factors. A strong balance sheet to manage through the commodity price cycle is necessary for survival. With the group's profitability largely driven by the volatile prices of oil, natural-gas and NGLs, we're not that excited about the structure of this commodity-producing space.

Economic Profit Analysis

ValueCreation™

GOOD

The best measure of a firm's ability to create value for shareholders is expressed by comparing its return on invested capital (ROIC) with its weighted average cost of capital (WACC). The gap or difference between ROIC and WACC is called the firm's economic profit spread. Coterra Energy's 3-year historical return on invested capital (without goodwill) is 14.4%, which is above the estimate of its cost of capital of 10.2%. As such, we assign the firm a ValueCreation™ rating of GOOD. In the chart to the right, we show the probable path of ROIC in the years ahead based on the estimated volatility of key drivers behind the measure. The solid grey line reflects the most likely outcome, in our opinion, and represents the scenario that results in our fair value estimate.

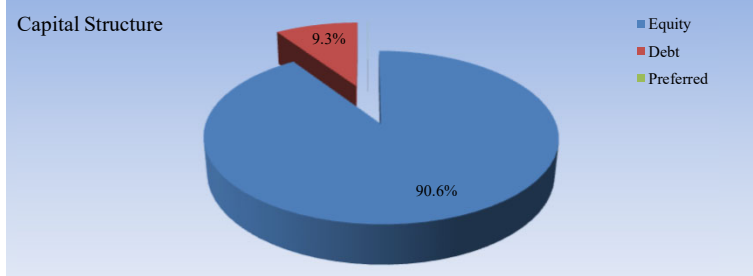

ROIC - WACC Spread, 3-year historical average	4.2%
ROIC - WACC Spread, 5-year projected average	2.2%
These spreads equal the firm's annual average ROIC (excluding goodwill) less its WACC.	

ValueTrend™

NEGATIVE

Coterra Energy receives a ValueTrend™ rating of NEGATIVE, which is based on the company's trailing three-year performance. The firm's ROIC (excluding goodwill) fell to 11.5% last year from its trailing 3-year average of 14.4%. We expect ROIC (excluding goodwill) to be in the ballpark of about 12% by the end of our discrete forecast period, with downside risk to about 5% over that time period.

Assessment of Company Dividend Strategy

Key Strengths

In October 2021, Cabot merged with Cimarex through an all-stock to create Coterra Energy, an upstream company focused on extracting raw energy resources from the Marcellus shale play, the Permian Basin region, and the Anadarko Basin in the US. The merger generated material annualized cost savings. In 2021, Coterra Energy paid out \$0.30 per share in special dividends and paid out additional special dividends in 2022. The company's outlook is quite bright in the current environment, though revenue and earnings have faced pressure, more recently. Cash flow from operations has held up nicely, however.

Potential Weaknesses

The most significant risks to Coterra's dividend come from the inherent volatility of raw energy resources pricing, its capital-intensive business model with respect to drilling, completion and other fixed assets, and its net debt load. Delivering on its synergies target, with an eye towards ~\$100 million in annualized G&A cost savings, will be key. Competing use of capital with an eye towards share buybacks could hinder future dividend growth, but management is targeting returning at least 50% of free cash flow to shareholders. We expect that Coterra will grow its dividend at a decent pace going forward, aided by the favorable landscape for energy producers.

Note: Valuentum may provide an adjusted ROIC measure to better reflect the economic substance of a company's operations, as in the case of companies with negative invested capital.

Growth Analysis

Revenue Growth

MODEST

		Last Fiscal Year Revenue	3-year Historical CAGR	5-year Projected CAGR
Coterra Energy	USD	5,684	59.3%	6.6%
Chevron	USD	194,799	27.5%	2.7%
Enterprise Product Partners	USD	58,186	21.1%	-1.4%
Exxon Mobil	USD	402,217	15.7%	-1.9%
Schlumberger	USD	28,091	-5.1%	8.5%
Peer Median			18.4%	0.6%
Industry Median			16.7%	2.1%

Coterra Energy's revenue expansion has been greater than the median of both its peer group and industry group during the past three years. We expect the firm's revenue expansion to outpace the median of its peer group and industry group during the next five years. Our growth assessment of each firm is based on the firm's 5-year forward revenue CAGR. Coterra Energy's future pace of revenue growth is MODEST, in our opinion.

EBITDA Growth

		Last Fiscal Year EBITDA	3-year Historical CAGR	5-year Projected CAGR
Coterra Energy	USD	3,795	76.8%	8.2%
Chevron	USD	42,177	47.5%	5.9%
Enterprise Product Partners	USD	8,788	5.2%	0.2%
Exxon Mobil	USD	91,128	38.3%	-1.7%
Schlumberger	USD	5,820	1.5%	12.5%
Peer Median			21.7%	3.1%
Industry Median			19.4%	1.4%

Coterra Energy's EBITDA expansion has been greater than that of both its peer group and industry group during the past three years. We expect the firm's EBITDA expansion to outpace its peer group and industry group during the next five years. Schlumberger sports the highest EBITDA growth rate among peers.

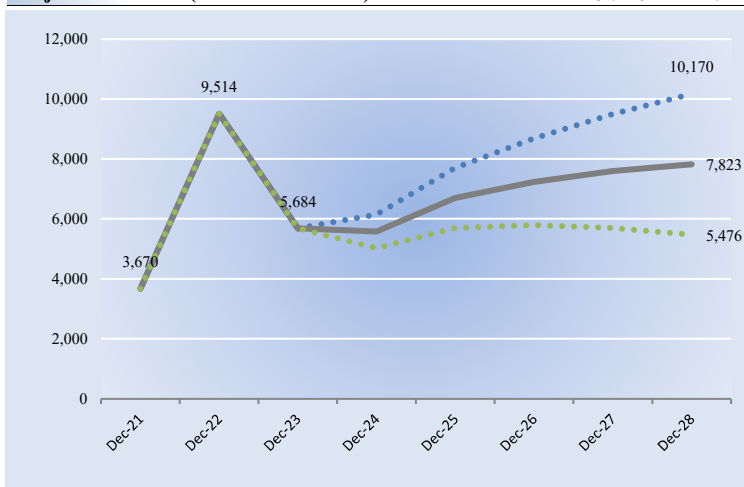

Net Income Growth

		Last Fiscal Year Net Income	3-year Historical CAGR	5-year Projected CAGR
Coterra Energy	USD	1,625	100.7%	10.0%
Chevron	USD	21,369	-256.8%	5.5%
Enterprise Product Partners	USD	5,489	6.1%	-2.5%
Exxon Mobil	USD	55,740	57.2%	-5.3%
Schlumberger	USD	3,441	-169.8%	12.8%
Peer Median			-81.8%	1.5%
Industry Median			-76.4%	0.0%

Coterra Energy's net income expansion has been greater than that of both its peer group and industry group during the past three years. We expect the firm's net income expansion to outpace its peer group and industry group during the next five years. Schlumberger sports the highest net income growth rate among peers.

Cash Flow and Financial Leverage Analysis

Cash Flow Generation

STRONG

The bars above show the firms operating cash flow, capital expenditures, and free cash flow, respectively.

Firms that generate a free cash flow margin (free cash flow divided by total revenue) above 5% are usually considered cash cows. Coterra Energy's free cash flow margin has averaged about 30.8% during the past 3 years. As such, we think the firm's cash flow generation is relatively **STRONG**. The free cash flow measure shown above is derived by taking cash flow from operations less capital expenditures and differs from enterprise free cash flow (FCFF), which we use in deriving our fair value estimate for the company. For more information on the differences between these two measures, please visit our website at Valuentum.com. At Coterra Energy, cash flow from operations increased about 119% from levels registered two years ago, while capital expenditures expanded about 188% over the same time period.

Cash Flow from Operations

		Last Fiscal Year CFO	3-year Historical CAGR	5-year Projected CAGR
Coterra Energy	USD	3,658	67.5%	7.1%
Chevron	USD	35,609	49.9%	4.3%
Enterprise Product Partn	USD	8,038	7.2%	-0.9%
Exxon Mobil	USD	76,797	37.2%	-4.0%
Schlumberger	USD	3,720	-11.9%	18.9%
Peer Median			22.2%	1.7%
Industry Median			23.4%	1.9%

Coterra Energy's cash flow from operations expansion has been greater than that of both its peer group and industry group during the past three years. We expect the firm's cash flow from operations expansion to outpace its peer group and industry group during the next five years. Schlumberger sports the highest expected cash flow from operations growth rate among peers.

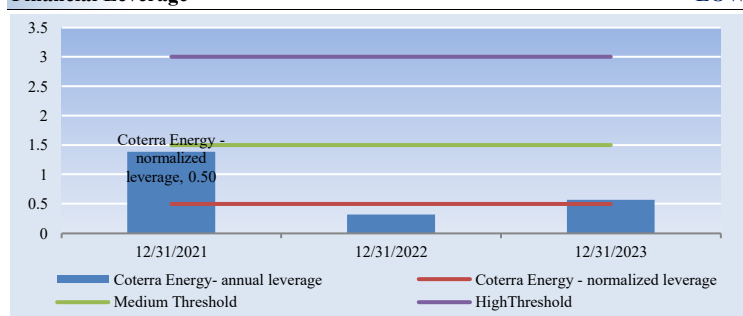

Free Cash Flow (CFO-capital expenditures)

		Last Fiscal Year FCF	3-year Historical CAGR	5-year Projected CAGR
Coterra Energy	USD	1,559	97.6%	-6.5%
Chevron	USD	19,780	128.6%	5.7%
Enterprise Product Partn	USD	7,666	7.4%	-1.1%
Exxon Mobil	USD	58,390	121.7%	-10.2%
Schlumberger	USD	1,515	-19.7%	30.6%
Peer Median			64.6%	2.3%
Industry Median			37.9%	0.6%

Coterra Energy's free cash flow expansion has been greater than that of both its peer group and industry group during the past three years. We expect the firm's pace of free cash flow growth to fall below that of both its peer group and industry group during the next five years. Schlumberger sports the highest expected free cash flow growth rate among peers.

Financial Leverage

LOW

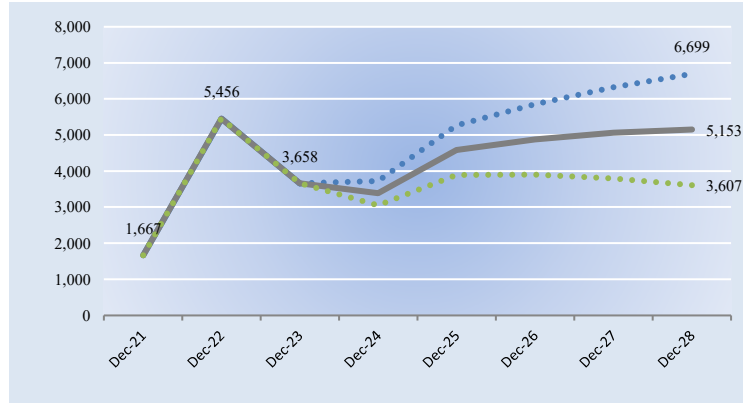

The bars above show the firm's annual debt-to-EBITDA. The red line shows the firm's normalized measure.

Firms that exhibit high leverage tend to be more risky than firms with relatively low debt loads, all else equal. We measure financial leverage by taking a firm's current total debt load and dividing it by the firm's trailing average 3-year annual EBITDA. Firms that are over 3 for this metric, we rate as having high leverage. Companies that have less than 1.5 turns of leverage (or a measure below 1.5), we rate as having low leverage. Coterra Energy's normalized debt-to-EBITDA measure of about 0.5 puts it in the **LOW** camp.

Valuation Breakdown

In the chart below, we show the build up to our estimate of total enterprise value for Coterra Energy and the break down to the firm's total equity value, which we estimate to be about 22.31USD billion. The present value of the enterprise free cash flows generated during each phase of our model and the net balance sheet impact is displayed. We divide total equity value by diluted shares outstanding to arrive at our \$29 per share fair value estimate.

In Millions of USD

DCF Valuation Summary

We think Coterra Energy is worth \$29 per share with a fair value range of \$22.00 - \$36.00. The margin of safety around our fair value estimate is driven by the firm's MEDIUM ValueRisk™ rating, which is derived from an evaluation of the historical volatility of key valuation drivers and a future assessment of them. Our near-term operating forecasts, including revenue and earnings, do not differ much from consensus estimates or management guidance. Our model reflects a compound annual revenue growth rate of 6.6% during the next five years, a pace that is lower than the firm's 3-year historical compound annual growth rate of 59.3%. Our model reflects a 5-year projected average operating margin of 42.3%, which is below Coterra Energy's trailing 3-year average. Beyond year 5, we assume free cash flow will grow at an annual rate of 8.8% for the next 15 years and 3% in perpetuity. For Coterra Energy, we use a 10.2% weighted average cost of capital to discount future free cash flows.

Value Rating

Margin of Safety Analysis

Our discounted cash flow process values each firm on the basis of the present value of all future free cash flows. Although we estimate the firm's fair value at about \$29 per share, every company has a range of probable fair values that's created by the uncertainty of key valuation drivers (like future revenue or earnings, for example). After all, if the future were known with certainty, we wouldn't see much volatility in the markets as stocks would trade precisely at their known fair values. Our ValueRisk™ rating sets the margin of safety or the fair value range we assign to each stock. In the graph above, we show this probable range of fair values for Coterra Energy. We think the firm is attractive below \$22 per share (the green line), but quite expensive above \$36 per share (the red line). The prices that fall along the yellow line, which includes our fair value estimate, represent a reasonable valuation for the firm, in our opinion.

ValueRisk™

MEDIUM

Coterra Energy receives a ValueRisk™ rating of MEDIUM based of the historical volatility of key drivers of economic value creation. The fair value range sets the margin of safety around our fair value estimate of the firm's shares.

Revenue Volatility	Greater than 50%
Gross Margin Volatility	Greater than 50%
Earnings (EBI) Volatility	Greater than 50%
Cash Flow (FCFF) Volatility	Greater than 50%
Fair Value Range	25.0%

The Fair Value Range sets the premium or discount on our estimate of the firm's fair value.

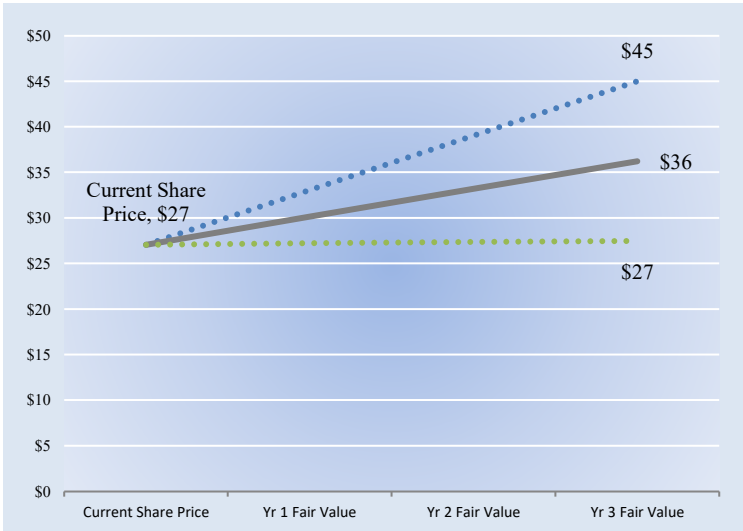

Upside and Downside Probabilities

Probability (fair value < \$0)	Less than 0.1%
Probability (fair value > 2x current share price)	0.02%

We strive to answer a few questions that investors often ask: 1) What are the chances of a total loss of investment in this company? and 2) What is the chance that the company is really worth twice what I paid for it? The probability (fair value < 0) strives to answer the first question. It indicates the chance that the firm may encounter insolvency based on the characteristics of its cash flow stream, capital structure, and risk profile. The probability (fair value > 2x current share price) strives to answer the second question. It is our best estimate of whether investors are participating in a half-off sale by buying the company's shares at current prices.

Future Path of Fair Value

We estimate Coterra Energy's fair value at this point in time to be about \$29 per share. As time passes, however, companies generate cash flow and pay out cash to shareholders in the form of dividends. The chart to the right compares the firm's current share price with the path of Coterra Energy's expected equity value per share over the next three years, assuming our long-term projections prove accurate. The range between the resulting downside fair value and upside fair value in Year 3 represents our best estimate of the value of the firm's shares three years hence. This range of potential outcomes is also subject to change over time, should our views on the firm's future cash flow potential change. The expected fair value of \$36 per share in Year 3 represents our existing fair value per share of \$29 increased at an annual rate of the firm's cost of equity less its dividend yield. The upside and downside ranges are derived in the same way, but from the upper and lower bounds of our fair value estimate range.

The graph above shows the expected future fair value of the firm's shares relative to its current stock price.

Technical Analysis

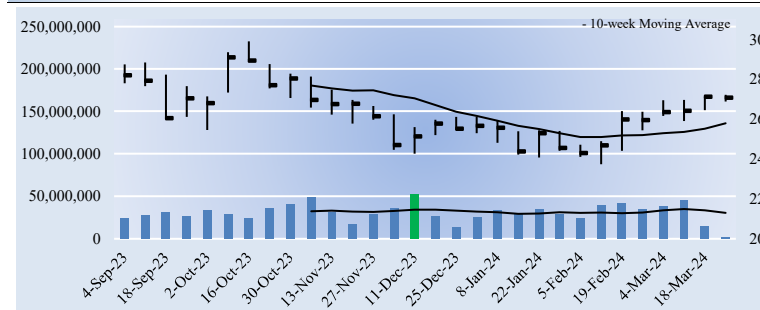

Technical Evaluation

BULLISH

The firm's near-term moving average (5-week, grey line) and medium-term moving average (13-week, red line) are shown in the chart above. Typically, when a shorter-term moving average crosses a medium- or longer-term moving average from below, it represents a bullish signal. If the short-term moving average crosses from above, traders often view this as bearish. Coterra Energy's 5-week moving average resides above its 13-week measure, indicating a BULLISH trend. Such a move could indicate a reversal in the firm's 30-week downtrend.

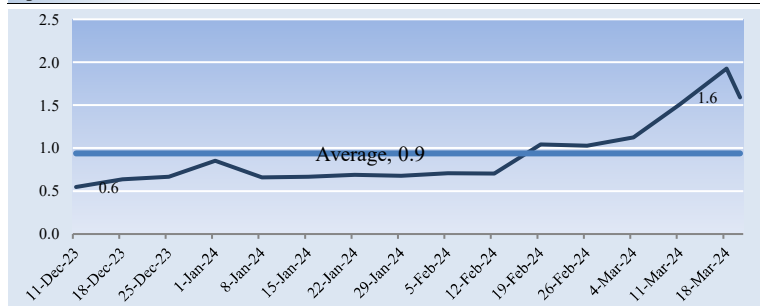

30-week Price and Volume Chart (weekly)

In the chart above, we pinpoint the heaviest accumulation or distribution week of the firm, determined by the week with the highest trading volume during the past 30 weeks. A heavy accumulation (buying) or distribution (selling) week often determines the future near-term direction of the firm's share price, as money managers continue to move in or out of the stock in the days and weeks ahead driving the stock up or down, respectively. For Coterra Energy, the week with the highest trading volume out of the last 30 weeks was a week of heavy buying, or accumulation (green bar). Such market activity could indicate a reversal of a downtrend or further confirmation of the firm's uptrend.

Upside/Downside Volume

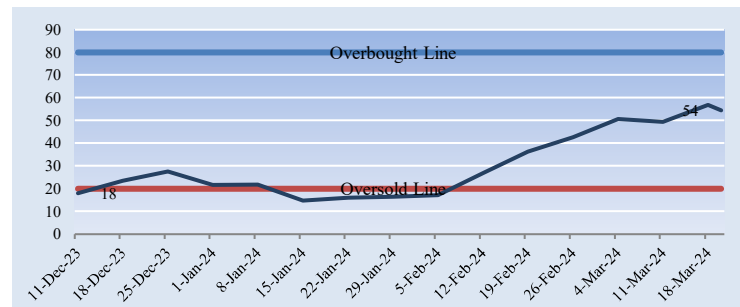

BULLISH

The level and trend of the Upside/Downside (U/D) volume ratio reveals whether institutional participation has been bullish or bearish as of late. Coterra Energy's U/D volume ratio of 1.6 is not only greater than 1 but also is better than its trailing average, indicating BULLISH institutional interest during the past several weeks.

Money Flow Index (MFI)

NEUTRAL

The Money Flow Index (MFI) is an oscillator that uses price and volume to measure buying and selling pressure. Chartists often look for overbought (above 80) and oversold (below 20) levels to warn of unsustainable near-term price extremes. Coterra Energy's MFI of 54 is neutral, suggesting the firm's stock is neither overbought nor oversold at this time. However, a score over 50 tends to favor bulls. The MFI can also be used to gauge the strength or weakness of a firm's price trend. In Coterra Energy's case, its stock price and money flow neither reveals a bullish nor bearish divergence, further supporting our neutral view on its money flow action.

Relative Price Strength

WEAK

A firm's relative price strength can be assessed over any number of time horizons. We show the firm's performance over the past 5 weeks, 13 weeks, and 30 weeks below. In arriving at our relative strength rating for each company, we assess the past 13 weeks, which includes the market's reaction to the firm's most recently reported quarter, where applicable, and other more recent economic events. During the past 13 weeks, Coterra Energy's shares returned 5.3%, while the market benchmark returned 10.4%. We think Coterra Energy's 13-week relative price performance is WEAK.

5-week Company Performance	3.7%
5-week Market Benchmark Performance	5.1%
5-week Relative Performance vs. Market Benchmark	-1.4%
13-week Company Performance	5.3%
13-week Market Benchmark Performance	10.4%
13-week Relative Performance vs. Market Benchmark	-5.1%
30-week Company Performance	-4.9%
30-week Market Benchmark Performance	12.2%
30-week Relative Performance vs. Market Benchmark	-17.1%

Weak			

Firms that are undervalued and currently showing near-term pricing strength score near the top right of the matrix.

Companies that are undervalued and showing near-term relative price strength could represent timely buys, as the stock may be attractive to both value and momentum investors. A cross section of the firm's equity valuation and its relative share price strength is shown in the matrix above. We tend to prefer undervalued stocks that have strong pricing momentum, also called Valuentum stocks.

Oil & Gas Complex

Oil & Gas Complex

Oil & Gas Complex

FAIRLY VALUED

We think the Oil & Gas Complex industry is fairly valued at this time. The industry's market cap is trading between 80% and 120% of our estimate of its fair value based on our DCF process. Although we use a firm-specific ValueRisk™ measure to determine whether a firm is undervalued or overvalued based on our DCF process, we consider an industry to be undervalued if it is trading below 80% of our estimate of its fair value and overvalued if it is trading at over 120% of our estimate of its fair value. We think these fair value ranges are appropriate given the diversification benefits of holding a basket of stocks. Although there may be individual opportunities within the Oil & Gas Complex industry, we don't find the industry as a whole attractive based solely on valuation.

The above bar chart reveals the price/fair value of the company, its peers, and the industry as a whole.

Shaded blue denotes that the firm has earned the highest rating for that respective category.

Company Name	Ticker	Market Cap (USD-mil)	Investment Style	DCF Valuation	Relative Valuation	ValueCreation™	ValueRisk™	ValueTrend™	Technicals	Relative Strength

Valuentum's Full Page Stock Report

A DCF Valuation

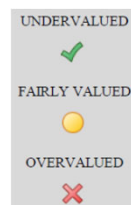

Shows whether the firm is undervalued, fairly valued, or overvalued based on our DCF process and by how much.

B Valuentum Buying Index (VBI)

Provides insight into the timeliness of an investment opportunity. We rank firms from 1 to 10 based on rigorous financial, valuation, and technical analysis. A 10 represents one of our top picks.

 Valuentum Value Rating (VVR)

Indicates whether we think a firm is undervalued, fairly valued, or overvalued on the basis of our DCF process.

D Investment Considerations

Evaluates firms on 12 different measures, from the firm's growth and cash flow generation to the stock's money flow index and upside/downside volume. We reveal technical support and resistance levels.

E 30-week Price and Volume Action

Volume Action
Displays the last accumulation or distribution week of the stock and historical price and volume action.

Company Vitals

Shows sector, industry and other relevant company information.

Normalized EPS and EBITDA

Estimation of the firm's normalized earnings measures and the corresponding valuation multiples.

 Returns Summary

3-year averages of the firm's key return measures, including return on invested capital, with and without goodwill.

M Leverage, Coverage, and Liquidity

A snapshot of the company's financial health.

Financial Summary

A summary of the proforma financial statements found in the extended report.

About Valuentum

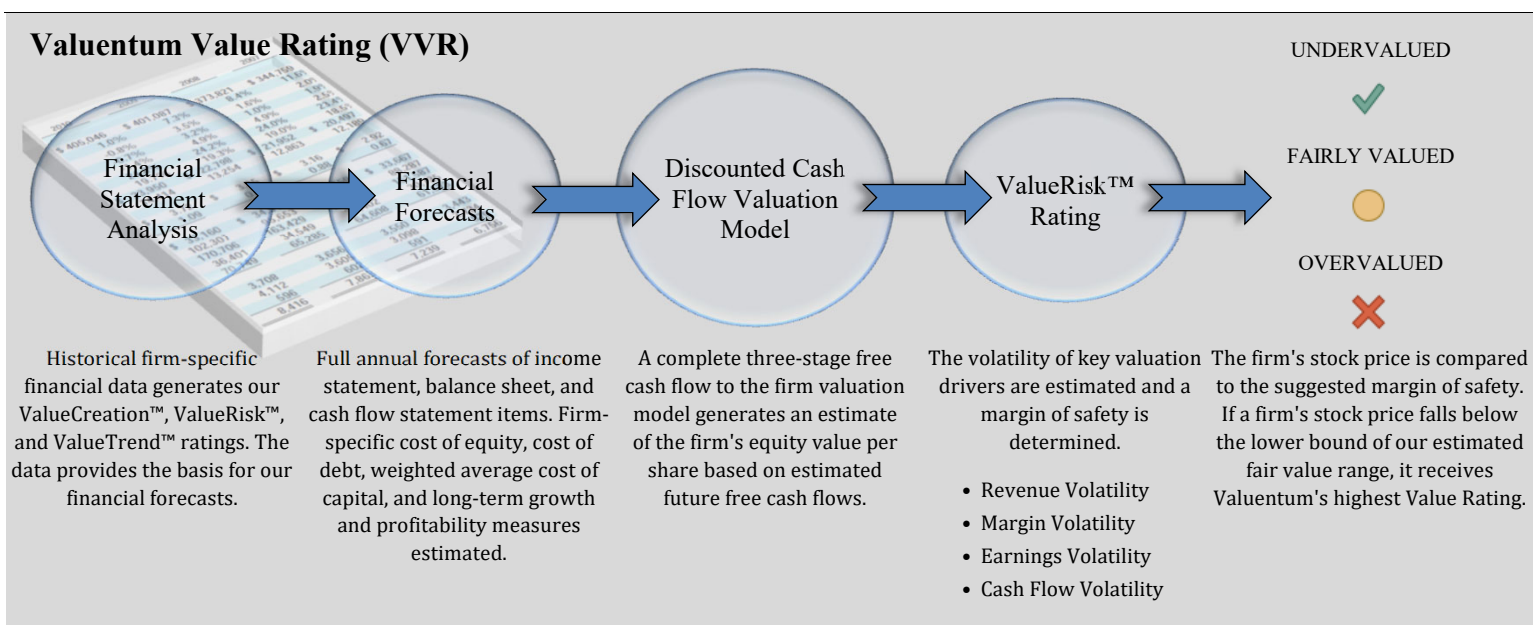

@Valuentum, we strive to stand out from the crowd. Most investment research publishers fall into a few camps, whether it be value, growth, income, momentum, chartist or some variant of the aforementioned. We think each in its own right holds merit, but we think the combination of these approaches can be even more powerful. After all, stock price movements aren't just driven by investors of the value or growth variety, but by all market participants. Therefore, we look at stocks from a variety of investment perspectives in order to better understand and identify ideas. We want to provide relevant information.

The core of our process is grounded in rigorous discounted cash flow analysis and incorporates the concept of a margin of safety. We offer a fair value estimate for each company and provide a relative valuation assessment in the context of a company's industry and closest peers. A cross section of our ValueCreation™ and ValueRisk™ ratings provides a financial assessment of a company's business quality, while our ValueTrend™ rating offers insight into the trajectory of a firm's economic profit creation. The Economic Castle rating measures the magnitude of future economic value generation, and the Dividend Cushion ratio assesses the financial capacity of a company to keep raising its dividend.

Our analysis doesn't stop there. We also offer a technical evaluation of the stock as well as other momentum indicators. We not only want to reveal to readers which firms may be undervalued, in our view, but we also want to provide readers with information to help them assess entry and exit points. Most research publishers focus on arriving at a target price or fair value estimate, but may fall short of providing a technical assessment to bolster buy and sell disciplines. We strive to go the distance and provide readers with answers--not half the story.

An explanation of our approach would not be complete if we didn't describe our ideal stock idea. We're looking for companies that are undervalued--both on a DCF basis and versus peers--have strong growth potential, have a solid track record of creating economic profits for shareholders with reasonable risk, are strong cash flow generators, have manageable financial leverage, and are currently showing bullish technical and momentum indicators. For dividend growth ideas, we look for companies that have both the capacity and willingness to keep raising the dividend.

Can such stock ideas exist? Subscribe to Valuentum to receive our best investment ideas and analysis on hundreds of stocks, dividends, ETFs and more.

Methodology for Picking Stocks - Valuentum Buying Index™ (VBI)

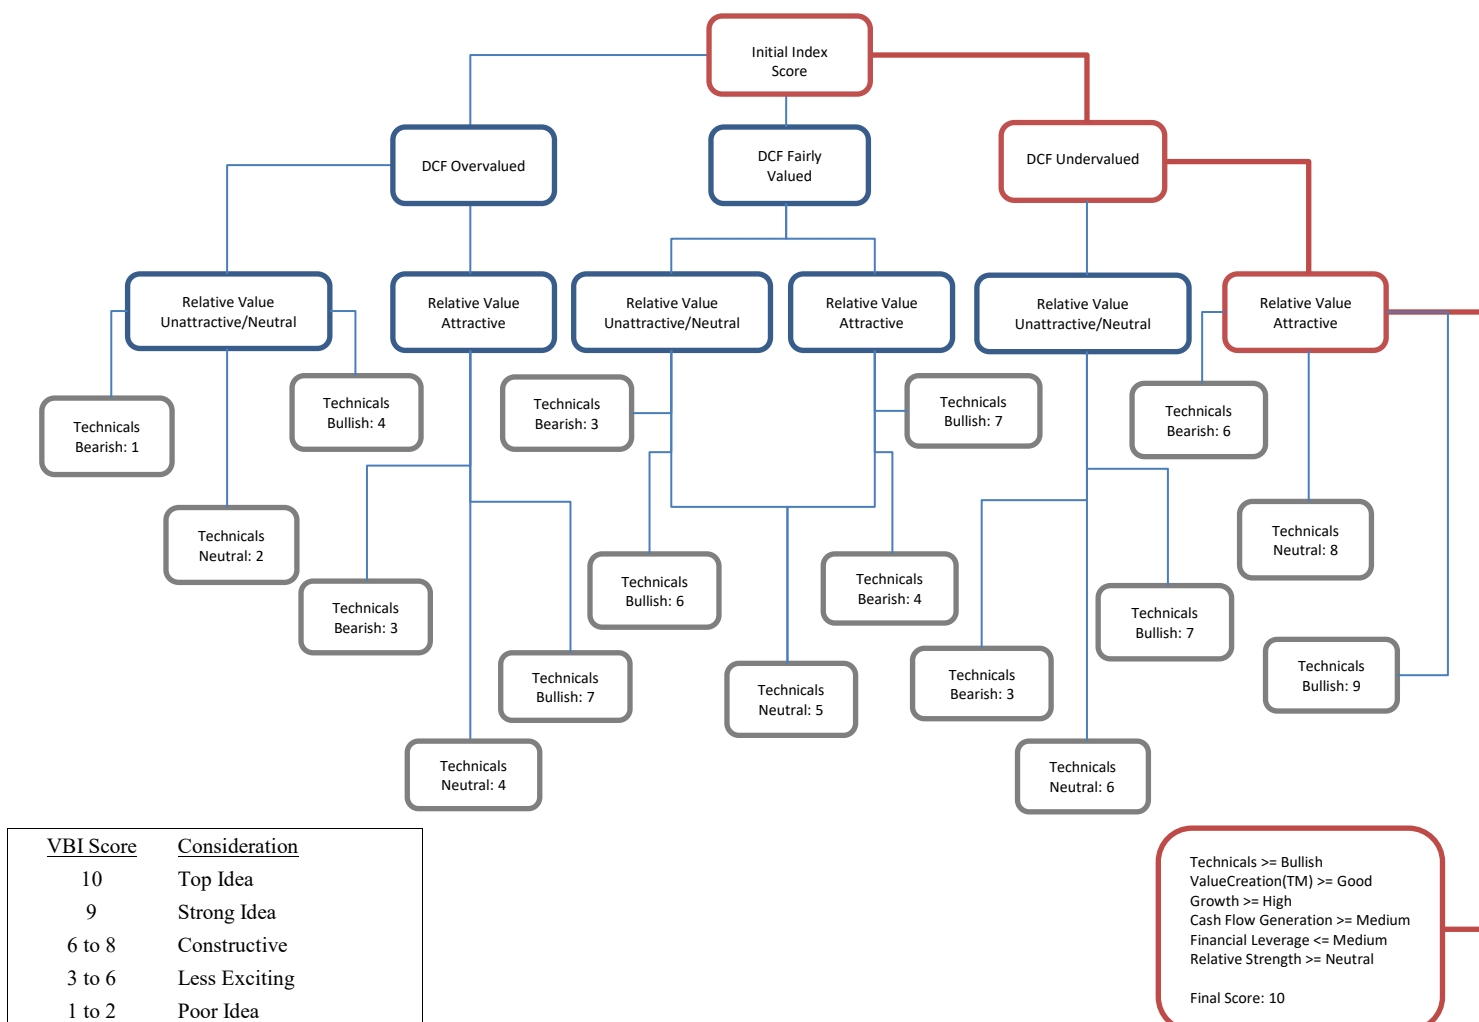

@ Valuentum, we like to look at companies from a number of different perspectives. The Valuentum Buying Index (VBI) combines rigorous financial and valuation analysis with an evaluation of a stock's technicals to derive a rating between 1 and 10 for each company. The VBI places considerable emphasis on a company's discounted cash-flow (DCF) valuation, its relative valuation versus peers (both forward PE and PEG ratios), and its technicals in order to help readers assess entry and exit points on the most interesting ideas.

Let's follow the red line on the flow chart below to see how a company can score a 10, the best mark on the index. First, the company would need to be 'undervalued' on a DCF basis and 'attractive' on a relative

value basis. The stock would also have to be exhibiting 'bullish' technicals. The firm would need a ValueCreation™ rating of 'good' or 'excellent', exhibit 'high' or 'aggressive' growth prospects, and generate at least a 'medium' or 'neutral' assessment for cash flow generation, financial leverage, and relative price strength.

This is a tall order for any company. Stocks that don't make the cut for a 10 are ranked accordingly, with the least attractive stocks, in our opinion, garnering a rating of 1. Most of our coverage universe registers ratings between 3 and 7, but at any given time there could be large number of companies garnering either very high or very low scores, especially at market lows or tops, respectively.

The Best Ideas Newsletter portfolio puts the VBI into practice.

Glossary

Estimated Fair Value. This measure is our opinion of the fair equity value per share of the company. If our forecasts prove accurate, which may not always be the case, we may expect a firm's stock price to converge to this value within the next 3 years.

Fair Value Range. The fair value range represents an upper bound and lower bound, between which we would consider the firm to be fairly valued. The range considers our estimate of the firm's fair value and the margin of safety suggested by the volatility of key valuation drivers, including revenue, gross margin, earnings before interest, and enterprise free cash flow (the determinants behind our ValueRisk™ rating).

DCF Valuation. We opine on the firm's valuation based on our DCF process. Firms that are trading with an appropriate discount to our fair value estimate receive an UNDERVALUED rating. Firms that are trading within our fair value range receive a FAIRLY VALUED rating, while firms that are trading above the upper bound of our fair value range receive an OVERVALUED rating.

Relative Value. We compare the firm's forward price-to earnings (PE) ratio and its price/earnings-to-growth (PEG) ratio to that of its peers. If both measures fall below the peer median, the firm receives an ATTRACTIVE rating. If both are above the peer median, the firm receives an UNATTRACTIVE rating. Any other combination results in a NEUTRAL rating.

ValueCreation™. This is a proprietary Valuentum measure. ValueCreation™ indicates the firm's historical track record in creating economic value for shareholders, taking the average difference between ROIC (without goodwill) and the firm's estimated WACC during the past three years. The firm's performance is measured along the scale of EXCELLENT, GOOD, POOR, and VERY POOR. Those firms with EXCELLENT ratings have a demonstrated track record of creating economic value, while those that register a VERY POOR mark have been destroying economic value.

ValueRisk™. This is a proprietary Valuentum measure. ValueRisk™ indicates the historical volatility of key valuation drivers, including revenue, gross margin, earnings before interest, and enterprise free cash flow. The standard deviation of each measure is calculated and scaled against last year's measure to arrive at a percentage deviation for each item. These percentage deviations are weighted equally to arrive at the corresponding fair value range for each stock, measured in percentage terms. The firm's performance is measured along the scale of LOW, MEDIUM, HIGH, and VERY HIGH. The ValueRisk™ rating for each firm also determines the fundamental beta of each firm along the following scale: LOW (0.85), MEDIUM (1), HIGH (1.15), VERY HIGH (1.3).

ValueTrend™. This is a proprietary Valuentum measure. ValueTrend™ indicates the trajectory of the firm's return on invested capital (ROIC). Firms that earned an ROIC last year that was greater than the 3-year average of the measure earn a POSITIVE rating. Firms that earned an ROIC last year that was less than the 3-year average of the measure earn a NEGATIVE rating.

Cash Flow Generation. Firms' cash flow generation capacity are measured along the scale of STRONG, MEDIUM, and WEAK. A firm with a 3-year historical free cash flow margin (free cash flow divided by sales) greater than 5% receives a STRONG rating, while firms earning less than 1% of sales as free cash flow receive a WEAK rating.

Financial Leverage. Based on the firm's normalized debt-to-EBITDA metric, we rank firms on the following scale: LOW, MEDIUM, and HIGH. Companies with a normalized debt-to-EBITDA ratio below 1.5 receive a LOW score, while those with a measure above 3 receive a HIGH score.

Upside/Downside Volume. Heavy volume on up days and lower volume on down days suggests that institutions are heavily participating in a stock's upward advance. We use the trailing 14-week average of upside and downside volume to calculate an informative ratio. We rank each firm's U/D volume ratio along the following scale: BULLISH, IMPROVING, DETERIORATING, and BEARISH.

Investment Style. Valuentum uses its own proprietary stock-classification system. Nano-cap: Less than \$50 million; Micro-cap: Between \$50 million and \$200 million; Small-cap: Between \$200 million and \$2 billion; Mid-cap: Between \$2 billion and \$10 billion; Large-cap: Between \$10 billion and \$200 billion; Mega-cap: Over \$200 billion. Blend: Firm's that we think are undervalued and exhibit high growth prospects (growth in excess of three times the rate of assumed inflation). Value: Firm's that we believe are undervalued, but do not exhibit high growth prospects. Growth: Firms that are not undervalued, in our opinion, but exhibit high growth prospects. Core: Firms that are neither undervalued nor exhibit high growth prospects.

Company Vitals. In this section, we list key financial information and the sector and industry that Valuentum assigns to the stock. The P/E-Growth (5-yr), or PEG ratio, divides the current share price by last year's earnings (EPS) and then divides that quotient by our estimate of the firm's 5-year EPS growth rate. The estimated normalized diluted EPS and estimated normalized EBITDA represent the five-year forward average of these measures used in our discounted cash flow model. The P/E on estimated normalized EPS divides the current share price by estimated normalized diluted EPS. The EV/estimated normalized EBITDA considers the current enterprise value of the company and divides it by estimated normalized EBITDA. EV is defined as the firm's market capitalization plus total debt, minority interest, preferred stock less cash and cash equivalents.

Business Quality Matrix. We compare the firm's ValueCreation™ and ValueRisk™ ratings. The box is an easy way for investors to quickly assess the business quality of a company. Firms that generate economic profits with little operating variability score near the top right of the matrix.

Timeliness Matrix. We compare the company's recent stock performance relative to the market benchmark with our assessment of its valuation. Firms that are experiencing near-term stock price outperformance and are undervalued by our estimate may represent timely buys.

Range of Potential Outcomes. The firm's margin of safety is shown in the graphic of a normal distribution. We consider a firm to be undervalued if its stock price falls along the green line and overvalued if the stock price falls along the red line. We consider the firm to be fairly valued if its stock price falls along the yellow line.

Return on Invested Capital. At Valuentum, we place considerable emphasis on return on invested capital (both with and without goodwill). The measure focuses on the return (earnings) the company is generating on its operating assets and is superior to return on equity and return on assets, which can be skewed by a firm's leverage or excess cash balance, respectively.

Technical Evaluation. We evaluate a firm's near-term and medium-term moving averages and money flow index (MFI) to assign each firm a rating along the following scale: VERY BULLISH, BULLISH, NEUTRAL, BEARISH, and VERY BEARISH.

Stock Price Relative Strength. We assess the performance of the company's stock during the past quarter, 13 weeks, relative to an ETF that mirrors the aggregate performance of constituents of the stock market. Firms are measured along the scale of STRONG, NEUTRAL, and WEAK. Companies that have outperformed the market index by more than 2.5% during this 13-week period receive a STRONG rating, while firms that trailed the market index by more than 2.5% during this 13-week period receive a WEAK rating.

Money Flow Index (MFI). The MFI is a technical indicator that measures buying and selling pressure based on both price and volume. Traders typically use this measure to identify potential reversals with overbought and oversold levels. We use a 14-week measure to rank firms along the following scale: EXTREMELY OVERBOUGHT (>90), OVERBOUGHT (80-90), NEUTRAL (20-80), OVERSOLD (10-20), EXTREMELY OVERSOLD (0-10).

Performance assessment of Valuentum metrics, including the Valuentum Buying Index, is ongoing, and we intend to update investors periodically, though Valuentum assumes no obligation to do so. Not all information is available on all companies. There may be a lag before reports and data are updated for stock splits and stock dividends.

Past simulated performance, whether backtested or walk-forward or other, is not a guarantee of future results. For general information about Valuentum's products and services, please contact us at valuentum@valuentum.com or visit our website at www.valuentum.com.

The High Yield Dividend Newsletter portfolio, the Best Ideas Newsletter portfolio and Dividend Growth Newsletter portfolio are not real money portfolios. Any performance, including that in the Nelson Exclusive publication, is hypothetical and does not represent actual trading. Past performance is not a guarantee of future results.

Valuentum is an investment research publishing company.

Valuentum has not owned and does not own any shares of stocks mentioned on its website or in this report. President of Investment Research Brian Nelson does not own any shares of stocks mentioned on Valuentum's website or in this report. Majority share owner of Valuentum, Elizabeth Nelson, currently has exposure to HON in her retirement account.

If an independent contributor or employee mentions a stock he or she owns, we disclose it in the article/report that mentions the security. Please view individual articles on Valuentum's website for additional disclosures. Contact us to learn more about Valuentum's editorial policies.
